CONCEPT OF MY NEW TV SHOW

The concept of my new T.V. show, without a second thought, would be time travel. In a mire of TV shows, we find these based on daily life struggles, friends, food and travel, supernatural etc. Mankind has always been fascinated about the idea of time travel, both back and forth. The idea of time travelling alone, gives us a sense of power and control. Control is what humans have always craved for. We feel the need to control everything and everyone that is around us. Control is achieved by good decision making. Right decisions are usually made when we are absolutely certain about something. Certainty is what time travel will give us. Wouldn't we be calmer and more composed if we knew exactly what our future holds for us? Time travel has not remained an abstract, unachievable idea anymore We have already heard about so many people who have made true predictions like Arthur Clarke did for geostationary satellite. According to Einstein's theory of relativity,

we can travel to different times if we are able to travel with the speed of light. Using this concept, I would like to make a show that will be liked by many people, specially the sci-fi lovers. In the show, the characters will be able to travel in time by using different occults and scientific theories for knowing the past and the future that is available to people as on date. They will make changes in the present and see different outcomes in future. There are many unresolved questions like is it magic or a God given gift and how is it that Nostredame could see the future and make many predictions. We will try to find plausible explanations to many such unknown miracles. People may react differently to this show, but I hope that my show inspires majority of the viewers to read and to try to know more about time travel.
